

Vocab Sheet: Lesson 1

editor - the text editor where you are writing your code. Microsoft word is a text editor.

JavaScript - the web programming language you are learning. JavaScript is a super powerful language that is AWESOME at making site interactive. For instance when you press a button and something happens, that's JavaScript!

programming language - a language designed to talk to computers! There are so many! You are learning one of them: JavaScript.

code - nickname for computer programming language

value - numbers, strings (words), and true/false are a few examples of "values" in a computer program.

object - a JavaScript object is a word that contains data. In this case properties or methods. More on those word next lesson!
